This bird checklist includes those species found in the Bear Creek Watershed during all seasons of the year in three elevation zones. A map of the watershed can be found at <http://www.evergreenaudubon.org>, under "Nature & Conservation, Local Birding." Data for this checklist are derived from Evergreen Audubon monitoring projects, group bird walks, and individual birders' observations, including those in eBird.org. It is organized by families and reflects the taxonomic sequence of the Checklist of North American Birds, 7th edition, American Ornithological Society (1998) updated through the 63<sup>rd</sup> Supplement (2022).

#### Elevation Zones

**PF** (plains/foothills) - generally below 7,000' dominated by grasses, junipers, and shrubs; deciduous trees present in riparian areas.

**M** (montane) - between 7,000' and 9,500' dominated by Ponderosa Pine, Douglas Fir, and Lodgepole Pine (at higher elevations); aspen stands, willow shrubs, and meadows.

**SA** (subalpine/alpine) - areas above 9,500' dominated by Lodgepole Pine, Engleman Spruce, Subalpine Fir, and Bristlecone Pine; willow shrubs transition to alpine dwarf shrubs, forbs, and herbs; rock talus slopes.

#### Seasonal Status

B - known or suspected breeding

M - regular spring or fall migrant

R - resident throughout the year

W - present in winter

V - irregular visitant during any season

As of 1 January 2023, 334 species have been recorded in the Bear Creek Watershed
